Summary of 2008 CESSE Conference

In this talk, we will be sharing our experience at the 2008 International Conference on Computer, Electrical, and Systems Science, and Engineering (CESSE), which was held at Cairo, Egypt between 6th and 8th February, 2008.

Papers that were presented covered a wide range of topics, such as, neural networks, optimization, control theory, data mining, and some applications in energy, medicine and education. This talk will give a brief overview of the research trends that were spotted at the conference. The talk will also provide an overview of research topics spanning different areas, along with their applications to a variety of fields.
